MANCINI TECHNOLOGY

Jon Mancini
TECHNOLOGY PARTNER

Your new tech department.

Custom apps, smarter websites, agents and more, built for your business and kept running for you.

WHAT WE HANDLE

Custom apps

Apps that replace spreadsheets and manual work, built around how your business actually runs.

Smarter websites

Updates, repairs and new pages handled for you, so the site keeps pace with the business.

Agents

Agents that handle your routine work alongside you, even when you take a break. They run on ChatGPT, Claude, Grok or Meta's Muse. They connect to your email, calendar and files. Nothing goes out until you approve it.

Everyday tech

Computers, Wi-Fi, email and accounts kept running and documented.

HOW IT WORKS

01

A free call

You tell us what's slowing the business down, and we say plainly what's worth fixing first.

02

A written plan

The scope and one fixed price in writing before any work starts.

03

Built and kept running

We build it, train your team, then keep it updated and fixed under a monthly care plan.

WHO WE WORK WITH

Small businesses with repetitive work, from solo owners to offices of about fifty people, like CPA firms, law offices, insurance agencies and dental practices.

FOURTEEN YEARS IN ENTERPRISE IT

Apple, Yale New Haven Hospital, Travelers and Netflix, among others. Jon builds with AI tools daily and personally reviews every deliverable.

Free tech assessment

For up to five local businesses through December 15. We look at how work moves through your office, how your team uses its tools and AI, and where your data's at risk. Then you get a written plan.
